

HYPER-D

Breakthrough in CCTV for licensed premises

Baxall have introduced a radical new camera technology designed to cope with the specific problems of capturing images outside entrances to licensed premises

Typically where street entrances to pubs, restaurants and nightclubs have sunlight or bright lights silhouetting the faces of incoming patrons, pictures from this all important shot may not give enough detail to see the potential offender's face

Often this shot is vital to confirm that a suspect was at the premises at the time when an incident occurred.

The Hyper-D camera overcomes this problem by exposing a scene on a pixel-by-pixel basis and can show significantly more detail on the face of someone entering a premise irrespective of the contrasting light in the scene

For other cameras in licensed premises Baxall have developed a camera selector CD to help users and specifiers choose the most appropriate camera based on factors such as lighting levels, camera position and picture quality.

HYPER-D

I'd like to know more about the Hyper-D camera

- please contact me to discuss my specific requirement
- please send me the Hyper-D CD-ROM demonstrating the effectiveness of this new technology
- please send me a camera selector CD to help in advise for all camera positions
